Somewhere along the way, there is a big chance that a person has met or might even be related to someone who is denounced infertile by doctors. There will be a point where a person can hear about someone being depressed or antagonized by the feeling of being infertile. It's true, being infertile causes such depression. And to top this all, infertility doesn't affect women but also men as well. Frustration arises most of the time for couples who are trying to have their first born. That's how it is. You only get to find out the problem when you've exchanged vows. But there is always hope. And especially with the current advancement of medicines, there are methods with which a married couple can start ovarian cysts cause infertility .

Ovarian Cysts are a collection of fluids in an ovarian sac. The size of the cyst can vary from a size of a pea to an orange and the watery content can be thin and watery or be like mucous and thick. Ovarian cysts are common to those who are within their ovulation cycle. They are also likely to appear in pre menopausal women and up to 14.8% on post menopausal women. It is not limited to a single age group since all ages are possible to bear ovarian cysts. And sometimes, the ovarian cysts can cause problems like bleeding and pain. If this is the case, a more common way to find out whether it is present within the body is through an ultra sound where it is easily detected. But because of the ultrasound, there is a confusion that arises, can ovarian cysts cause infertility? And the answers will be different.

In some cases, a woman may have ovarian cysts and be fertile. Because of the ultrasound scans and the quality it produces, (of course for the better), an ovarian cysts can be spotted even if a tiny spec. And as a result, there can be confusion whether it is infertility or simply a cyst. It tends to be an over-reaction on the part of the woman and take it as part of the signs of infertility. But this may also be the wrong doing of the doctor because instead of calming the patient and giving proper advice, they may say that it is best to have the cysts removed, as an assumption to whether can ovarian cysts cause infertility or not.
